The Original since 1883

Filter papers for Industry & Laboratory | Spezialpapiere

Many companies claim to be steeped in "tradition". However, there is hardly any company that is more worthy of wearing this signet of consistency, experience and quality than Hahnemühle. The paper manufacturer can boast being founded in 1584.

What initially began with handmade writing paper was later complemented by art paper and speciality paper. Today, Hahnemühle produces more than 500 paper grades.

Traditional art papers are still being manufactured according to old recipes from high-quality cellulose or pulp and pure spring water. Hahnemühle fine quality papers have the best reputations worldwide.

Hahnemühle is regarded as the inventor of Digital FineArt paper for inkjet printers. As a pioneer and world market leader, Hahnemühle refines its artist papers for exclusive photography prints and art reproductions.

For more than 130 years Hahnemühle has produced the highest quality filter papers. In the past the high quality papers have been fabricated and ditributed under the Schleicher & Schuell brand, however since 2008 Hahnemühle has marketed these papers under it's own name.

Extensive know-how in paper making distinguishes us in the development of new types of paper and produce according to the market requirements and individual customer requests. Hahnemühle guarantees the highest possible degree of control and compliance with specifications through standardized and individual test methods.

Hahnemühle has its headquarter in Dassel, Lower Saxony and subsidiaries in Great Britain, France, the USA and China. Hahnemühle works together with worldwide business partnern and a network of product specialists, who have market know-how and Hahnemühle knowledge. The network of employees and partners is present at customers on site.

Focus on Quality

Hahnemühle offers products and services that consistently meet the requirements and expectations of our customers through the implementation of a strict quality management system.

A DEKRA certificate proves that Hahnemühle meets all DIN EN ISO 9001 standard requirements. Implementing a quality assurance system guarantees a high quality standard and competitiveness in the international markets with their increasing exacting quality expectations.

This certificate is also evidence of our marked customer focus, from product development to service. Ongoing further product developments and process improvements allow us to exceed the required quality standards.

Manufacturers of products and quality monitoring systems have to measure the performance and quality of a product in a wide range of application areas to demonstrate the adequacy of a product. ISO and EN standards, as well as official association and government body regulations, define the processes and tools for a particular area and the threshold values that must be complied with. Hahnemühle filter papers guarantee users a high level of security.

Hahnemühle syringe filters and membranes are subjected to strict quality controls during and after their manufacture. The storage life of the finished products in the warehouse is constantly monitored. In addition, every filter is subjected to the following five tests: bubble point, burst pressure, membrane adsorption, flow rate and extractable substances.

Hahnemühle has been an official "Brand of the Century" since 2016, and therefore belongs to the exclusive circle of Germany's strongest brands.

Product Line Laboratory Disposables

Hahnemühle manufactures an internationally renowned range of premium filter papers.

Our filter papers are suitable for a wide range of both liquid and air filtration technologies in various areas of application, and the raw materials – high quality pulps, cotton linters, glass and quartz fibres – for all laboratory and industrial uses.

Our portfolio includes:

- Pulp, glass and quartz fibre filter paper for quantitative and qualitative analyses and particle removal
- Pulp, glass and quartz fibre extraction thimbles & pots
- ISTA standard compliant bacteria test paper
- Blotting papers
- Chromatography paper
- pH indicator papers

The microfiltration range includes syringe and membrane filters for the reliable separation of microorganisms and particles in liquids, air and other gases.

We offer sterile and non-sterile syringe filters with CA, CR, PTFE and NY membranes

Membranes are available as sterile and non-sterile made of AC, NC, MCE, PTFE and NY.

Filter Papers for Technical and Industrial Applications

Customised high-end filter papers!

The development of individual filter paper solutions according to specific customer requirements is one of Hahnemühle's core business areas. Besides the usual raw materials such as cotton linters, pulp, glass or quartz fibres, we also use synthetic pulp, chemical and functional fibres.

The choice of raw materials is the first step of development. Refining these and adapting them to the production process leads to a unique recipe that results in a unique paper.

Our in-house team of developers ensures that the filter media meet all of the varied and specific requirements. In close cooperation with our customers, we create a paper with properties that match these requirements.

Hahnemühle has access to a wide selection of different raw materials to produce perfect filter papers for each customer application. More than 150 different paper grades made of linters, pulp and glass fibres can be produced at our production site in Dassel.

Due to our wide range of equipment and our internal organisation structure, we are also able to realise respective customer enquiries at short notice. We also manufacture smaller order quantities than usual in this market, which is especially useful for customers involved in development projects.

Looking for an individual solution?

We would be pleased to develop a product which meets your exact requirements. Contact us: + 49 5561 791 688 or filtration@hahnemuehle.com

Surprising Facts...

Throughout your life, you'll encounter Hahnemühle filter papers more often than you'd imagine, for example:

- when you move into your first apartment, the quality of the cement used to build it was tested with our papers
- when planning your family, as it's a component of pregnancy tests
- when eating cake, as the quality of the sugar beet seeds were tested with our papers
- at the hospital when your newborn is first examined; it is used as a carrier for blood samples
- when visiting a doctor; is it used for allergy tests, and urine and blood testing strips
- during the quality control process for your favourite drink, whether soft drinks, beer or wine
- during city breaks, as the air quality is also checked with Hahnemühle products
- under the shower, your tap water has been checked for legionella with a filter made by us
- when your car engine is checked; Hahnemühle products are used in the process

Testimonials

ASYSTEC. Chile

"ASYSTEC a company that sells filters in different formats and compositions: Pride felt to belong for so many years to the Hahnemühle Team, by their high standard of quality observed in each one of the products supplied to us, their always wise response to our needs, their flexibility according to the conditions of the market. Everything at the time is reflected in the high level of satisfaction of our customers to their products."

Strube GmbH, Germany

"As one of the few genuine paper manufactories, Hahnemühle is a competent and reliable partner for us. Hahnemühle supplies us with individually manufactured paper types and formats that meet our extremely specific requirements."

Karlsruhe Institute for Technology (KIT), Safety and Environment (SUM), coordination unit for wastewater, environmental and air quality monitoring, Germany

"We have been using the type GF8 filter papers with a 199mm diameter for our control and monitoring measures for a number of years now. This special size was developed by Hahnemühle in cooperation with KIT's predecessor (the Karlsruhe centre for research and nuclear research), and has been used very successfully ever since. We have never been disappointed by the high product quality, and particularly appreciate the customer-focus."

Why don't you place your trust in us as well!

Order up to three free samples of your choice. We are looking forward to hearing from you.
